 (54) HEAT-NOT-BURN CIGARETTE HAVING CAVITY CONTAINER SECTION
 (57) A heat-not-burn cigarette having a cavity container section, comprising a tobacco section (1), a multi-cavity container section (6), and a lip proximity section (4) sequentially and coaxially connected, and an external wrapping material (5) for limiting the tobacco section (1), the multi-cavity container section (6), and the lip proximity section (4). The tobacco section (1) comprises a smoking material: a core material of the tobacco section (1) is wrapped by an aluminum foil composite plug wrap (2) or an oil-proof plug wrap. Due to the material of the multi-cavity container section (6), the cigarette has a good cooling property, such that a user has no sensation of burning during smoking. By providing the multi-cavity container section (6), the cigarette has various flavors, a thick smell, and rich smoke. By providing an aluminum foil composite plug wrap (2) on the tobacco section (1), problems of contamination and deformation of the external wrapping material (5) due to that the core material absorbs moisture from air are reduced.
